Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New isolated nucleic acid encoding MP-1 protein, useful for preventing, treating, or ameliorating diseases associated with aberrant metalloproteinase activity, e.g. immune, metabolic, inflammatory and neurological disorders. neurological

Claim 5; Page 29; 473pp; English.

The invention describes an isolated nucleic acid molecule (I) encoding a metalloprotease (MP-1). (I) is useful for preventing, treating, or

```
cc aberrant glutamate transport or motor neuron disorder, such as CC amyotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like condition. The compositions and methods are also useful for diagnosing, CC prognosticating, treating, ameliorating and/or treating disorders CC associated with Mp-1 activity, e.g. diabetes, cancer, reproductive CC disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell CC aplasia), metabolic disorders (e.g. premature puberty, Kallman syndrome, CC or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, Puntington's disease or Tourette syndrome), liver and renal diseases and immune disorders (e.g. AIDS, rheumatoid arthritis CC fibrosis) and vascular, inflammatory and neurological disorders (e.g. Alzheimer's disease or Parkinson's disease). This is the amino acid CC sequence of a metalloprotease MP1 protein

(I) is useful for preventing, treating, or ameliorating a medical condition, particularly an immune disorder, an CC ameliorating a medical condition, particularly an immune disorder, an CC amyotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like CC condition. The compositions and methods are also useful for diagnosing, CC prognosticating, treating, ameliorating and/or treating disorders (CC associated with MP-1 activity, e.g. diabetes, cancer, reproductive CC disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell CC disorders (e.g. the premature puberty, Kallman syndrome, or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, CC and renal disease, Huntington's disease or Tourette syndrome), liver CC and renal diseases and immune disorders (e.g. AIDS, rheumatoid arthritis CC or sepsis), pulmonary diseases (e.g. pneumonia, emphysema or cystic fibrosis) and vascular, inflammatory and neurological disorders (e.g. Alzheimer's disease) This is the amino acid

The present invention also describes: (1) the preparation of the OSGPLP protein; (2) applying the OSGPLP protein in diagnosis; (3) the prevention and/or treatment of related diseases; (4) utilising the OSGPLP protein in screening its agonist, excitomotor and inhibitor and preparing an antibody against the OSGPLP protein, and (5) the use of the OSGPLP polynucleotide sequences, proteins, agonists, excitomotors, inhibitors and antibodies in treating diseases related to the abnormal OSGPLP gene and in preparing the medicine composite for the treatment

The invention relates to an isolated polypeptide comprising: any of 28 CC sequences of 48-1256 amino acids; a natural amino acid sequence at least CC 90% identical to the 28 amino acid sequences, 94% identical to a sequence CC of 703 or 267 amino acids, 96% identical to a sequence of 414 amino CC acids, or 97% identical to a sequence of 242 amino acids, all given in CC the specification; or a biologically active or immunogenic fragment of CC in diagnosing, treating and preventing diseases or conditions associated with the decreased expression of protein modification and maintenance CC molecules (PMOD), such as cell proliferative diseases (e.g. cancer, CC altergoes), neurological disorders (e.g. stroke, Parkinson's disease, CC endometriosis), autoimmune/inflammatory diseases (e.g. AIDS, CC endometriosis), developmental (e.g. ulcer, cirrhosis), reproductive (e.g. centergies), neurological disorders (e.g. stroke, Parkinson's disease, CC endometriosis), developmental (e.g. ulcer, cirrhosis), reproductive (e.g. conceriosis), autoimtestinal (e.g. ulcer, cirrhosis), reproductive (e.g. conceriosis), developmental, vesicle trafficking disorders, and CC infections (e.g. bacterial, viral, parasitic, protozoal). These are also CC useful in assessing the effects of exogenous compounds on the expression of the cragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the craget polymucleotide and compounds that specifically bind to or modulate the activity of the polypeptide. The microarray is useful in monitoring confit in the invention profiles. This sequence represents a human PMOD protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    22-JUN-2001; 2001US-0300508P.

The present invention relates to novel 38650, 28472, 5495, 65507, 81588 CC or 14354 nucleic acid molecules which encode adenosine deaminase, glyco-cc protease or seven transmembrane domain (77M) receptor family members. CC Sequences of the invention are useful in diagnosing and treating cancer cor lung cancer), immune disorders (e.g. selective IgA deficiency, rheumatoid carthritis, diabetes, allergy), heart or cardiovascular disorders (e.g., thousand in farction, thrombus) including endothelial cell disorders (e.g., psoriassis, Grave's disease), haematopoietic disorders, brain cC disorders (e.g., cerebral oedema, Parkinson's or Alzheimer's disease), classin and metabolic disorders (e.g., obseity), liver disorders or platelet cC (e.g. diagnostic assays, prognostic and therapeutic medicine cC (e.g. diagnostic assays, prognostic and therapeutic methods. The cultivation of the prognostic and therapeutic methods. The conclusion of the injunction are also used in chromosome mapping, tissue typing and collaborate in gene therapy. The present sequence is human glycoprotease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

```
CC 14354 nucleic acid molecules (I) and their encoded polypeptides (II). The CC 38650 nucleic acid molecule comprises a sequence encoding adenosine CC deaminase. The 28472 nucleic acid molecule comprises a sequence encoding comprises a sequence encoding a human glycoprotease. The 5495, 65507, 81588 and 14354 comprise CC a human glycoprotease. The 5495, 65507, 81588 and 14354 comprise CC sequences that encode a human seven transmembrane domain (7TM). The CC sequences are useful for diagnosing, preventing or treating a subject CC with or at risk of developing a disorder, e.g. cancer or aberrant CC cellular proliferation and/or differentiation (e.g. breast, ovarian, CC prostate, colon or lung cancer), immune disorders, heart disorders, cardiovascular disorders, endothelial disorders, heart disorders, colond vessel disorders, brain disorders, pain and metabolic disorders, CC liver disorders, brain disorders, pain and metabolic disorders, colond vessel disorders, brain disorders, pain and metabolic disorders, cC liver disorders, brain disorders, autoimmune disorders, cC sarcoma, leukaemia, Hodgkin's disease, autoimmune disorders, Kawasaki CC syndrome, Raynaud's disease, Crohn's disease, Kawasaki CC syndrome, Raynaud's disease, aneurysm, cerebral ischaemia, peripheral cachexia or diabetes. This is the amino acid sequence of the novel human collocation of the collection of the movel human collocation.

Gaps

The invention relates to an isolated 38650 (encoding adenosine deaminase), 28472 (encoding a glycoprotease), 5495 (encoding a 7 transmembrane receptor), 65507, 81588 or 14354 nucleic acid molecule (or a sequence which is at least 60% identical to the six nucleic acids or their open reading frames, fragments of at least is nucleotides, naturally occurring variants, or a DNA insert of the plasmid deposited with the American Type Culture Collection as Accession No. not defined in the specification, which encodes the amino acid sequence). Also included are a host cell containing the nucleic acids (used to produce the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             proteins), the encoded proteins, an antibody that selectively binds to the polypeptide, and identifying a compound that binds to/modulates the activity of the polypeptide. The nucleic acid molecules, polypeptides and methods are useful for diagnosing, treating cancer, aberrant cellular proliferation and/or differentiation, immune disorders, heart disorders, cardiovascular disorders including endothelial cell disorders, hambenatopoeitic disorders, blood vessel disorders, brain disorders, pain and metabolic disorders, liver disorders and platelet disorders (many examples of these disorders are given in the specification). The present sequence is the Human glycoprotease encoded by cDNA 28472

The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for disease which the gene is involved, or as target molecules for gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57377-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                         Region
                                                                                                                                                                                                                      Region
                                                                                                                                                                                                                                                     Region

These antagonists and compounds can be used to treat a wide range of bacterial infections. New antibiotics are urgently needed, as serious bacterial infections and antibiotic resistant strains are becoming increasingly prevalent. The proteins of the invention are essential proteins for bacterial viability, and represent new targets for antibiotics

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Proteins AAY52202-Y52217 encompass a novel family of proteins designated the ygjD family, after the mame given to the Escherichia coli family member. These proteins are essential for the survival of both Gram negative and Gram positive bacteria, although no function has as yet been ascribed to these proteins. The ygjD proteins, fragments of ygjD proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to nucleic acid vaccines for conferring immunity to rickettejal infection, including Ehrlichia ruminantium (formerly Cowdria ruminantium). The invention also relates to novel E. ruminantium polynucleotides and their corresponding proteins. Sequences of the invention are useful for inducing immunity, particularly protective immunity. They are also useful for detecting the presence of E. ruminantium in a biological sample. They are useful in vaccines for protecting animals or humans against rickettsial diseases, e.g. typhus, spotted fever or heart water. Sequences of the invention are useful for detecting animals to pathogens. The present sequence is E. ruminantih hypothetical o-sialoglycoprotein endopeptidase (lhworf4) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New Ehrlichia ruminantium polynucleotides, useful as vaccines for inducing protective immunity, and protecting animals or humans against rickettsial diseases, e.g. typhus, spotted fever or heart water.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Vaccine; immunity; rickettsial infection; spotted fever; heart water; typhus; pathogen; immunostimulant; antibacterial; lhworf4; enzyme; o-sialoglycoprotein endopeptidase.

The invention relates to an isolated nucleic acid comprising any one of CC the 6213 antisense sequences given in the specification where expression CC of the nucleic acid inhibits proliferation of a cell. Also included are: CC (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense CC nucleic acid; (2) a host cell containing the vector; (3) an isolated CC polypeptide or its fragment whose expression is inhibited by the containing the vector; (3) an isolated CC polypeptide; (5) producing the polypeptide; (6) inhibiting cellular CC proliferation or the activity of a gene in an operon required for CC the gene product or that has an activity against a biological pathway CC required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological CC pathway in which a proliferation-required gene or its gene product lies CC or a gene on which the test compound that inhibits gene product lies CC or a gene on which the test compound that inhibits proliferation of an CC compound's activity; (11) a culture comprising strains in which the gene CC product is overexpressed or underexpressed; (12) determining the extent CC which each of the strains is present in a culture or collection of Strains; or (13) identifying the target of a compound that inhibits the gene CC product of the strains. The antisense nucleic acids are useful for identifying proteins or accepting how accepting the cardidate molecules for rational CC drug discovery programs, or for screening bandledges mucleic acids required corrections of accepting to isolate candidate molecules for rational CC drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Wang

                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
